The **Swiss-Park MAX-3** adds vertical and lateral motion to achieve three levels of parking in minimum space.

Cars at ground level move left or right to allow any upper or lower level car to reach ground level. Users call their cars with an electronic key and the computer retrieves the car in less than 60 seconds.

The **MAX-3** fits most tall SUVs due to its space saving design, it includes front gates for extra safety and optional infrared remote controls for maximum ease.

The **Swiss-Park MAX-3** is the ideal machine for projects that seek a technologically advanced system that meets the most exigent design parameters and customer expectations of comfort and convenience.

- Triple Level Machine with Independent Access to all Cars
- SUVs up to 6'-7" high
- Safety Gates
- Remote Controls
- Smooth Steel Platform for Easy Walk-on
- Computer Controlled
- Versatile Design Adjusts to Site Conditions
